

Brasso Seco TAC Participatory Forest Management Planning - a Pilot Project

Source: Cadastral Sheet 14C

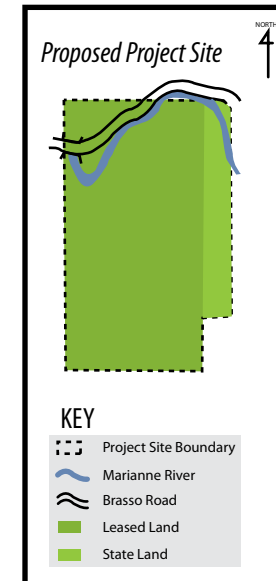

The first field day of the project was spent getting to know the area, agreeing on what resources to map and a basic GPS training session.

Seven members of the Brasso Tourism Action Committee participated in the GPS Training Session. This session was aimed at learning to collect way point data using Garmin GPS Receivers.

The group started collection of way point data along an existing benching, they propose to use as a trail route. Approximately five hours were spent in the field.

The group waits on the estimated accuracy from their GPS receivers.

Forest Officer Maharaj and community member Ms. Phillip record GPS readings and other data on the site.

Mr. Hernandez takes a GPS reading.

A strangler - an interpretive feature along the trail route.
